Agenda

Challenges with high-scale email sending

Introduction to Amazon SES and sending “reputation”

Discuss deliverability tools for enhancing reputation

Deep dive on deliverability troubleshooting

Email is still our most valuable communication tool

Today's email has an
average ROI of

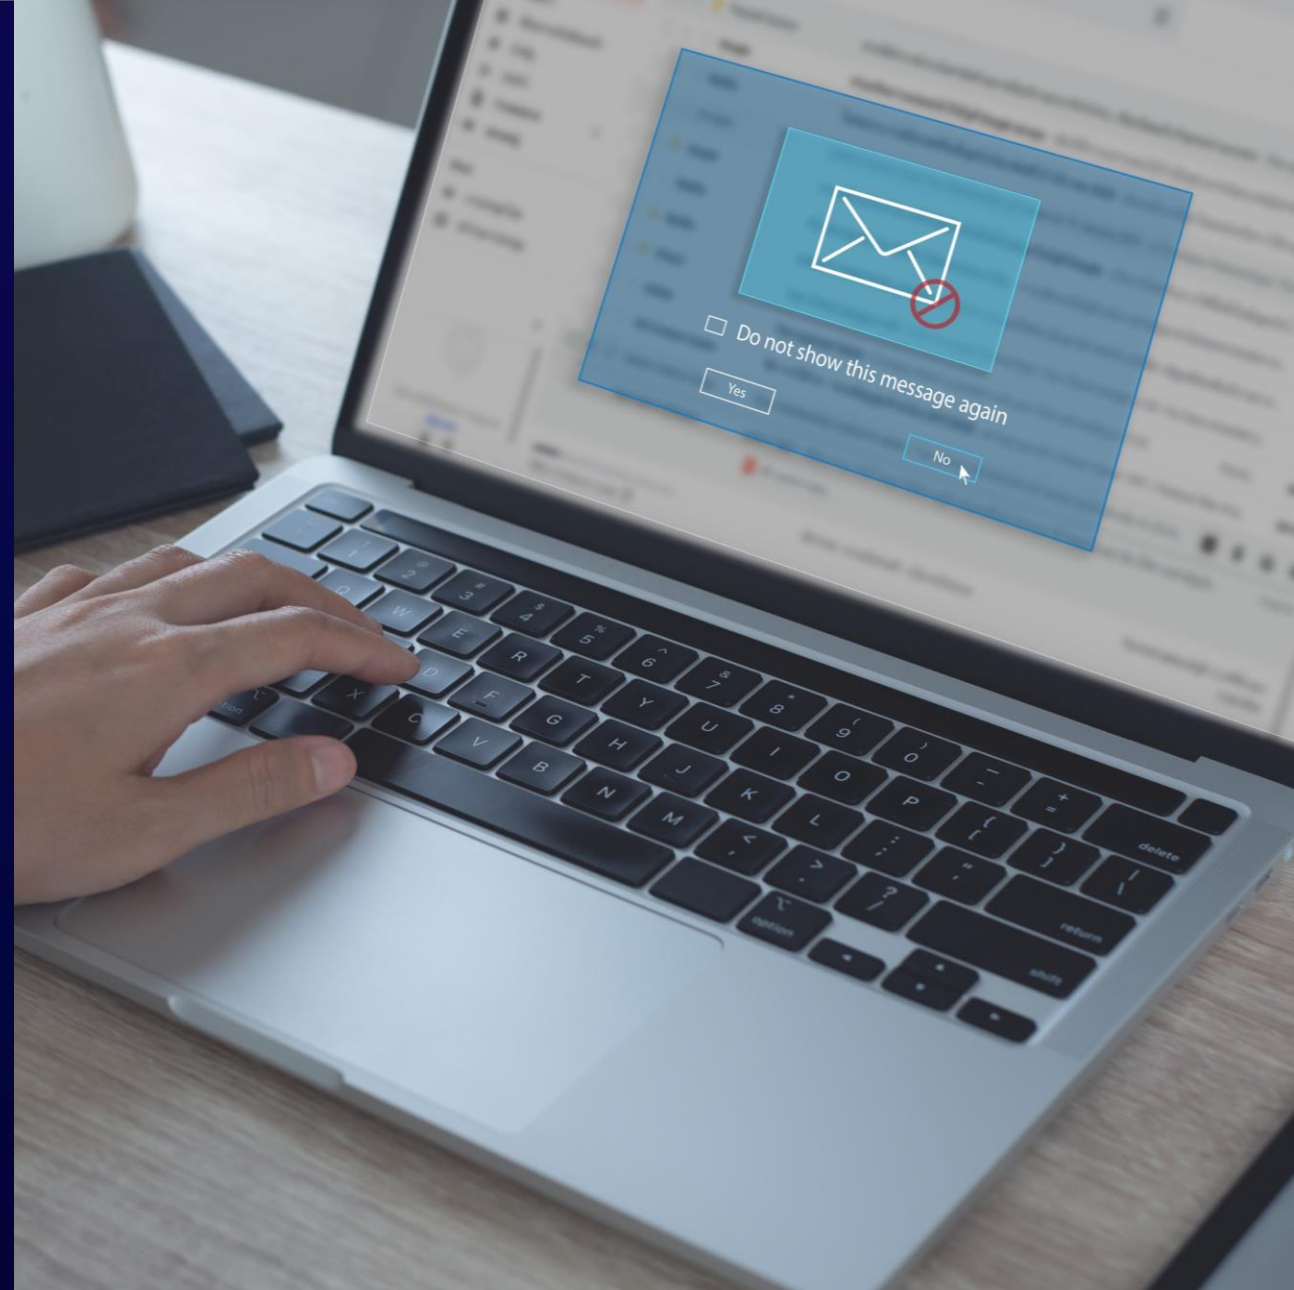

\$42

for every dollar spent¹

**But email doesn't work
when it goes to spam**

Only
1 in
12,500,000
messages in the spam folder receive a
response ¹

However, sending email at scale presents unique challenges

Sending 100 emails per month is different than sending **100 million** emails per month

- Deliverability and open rate can directly impact the bottom line
- Pricing matters – fractions of cents add up over millions of emails
- Risk of a bad sender reputation increases when sending emails at scale

Amazon Simple Email Service (Amazon SES)

Amazon Simple Email Service is a cost-effective, flexible, and scalable email service that enables developers to send mail from within any application

amazon

NETFLIX

duolingo

reddit

➤ Send at scale

Deliver high-volume email campaigns with the service that sent over 800 billion emails in 2022

➤ Trusted delivery

Reach customers' inboxes as a trusted sender with secure email authentication

➤ Compliance certified

Stay compliant from day one with HIPPA-eligible and FedRAMP-, GDPR-, and ISO-certified options

➤ At the lowest price

Send emails for $\frac{1}{3}$ the public price of other high-scale email service providers

Key updates in 2022/2023

Virtual Deliverability Manager (VDM)

VDM is a new set of capabilities that makes it easy for email administrators to monitor and automate their email sending to improve the chances of their emails reaching the recipient's inbox

Dedicated IPs (managed)

Amazon SES will automate sending via dedicated IPs for the customer removing the burden of having to set up and managed dedicated IPs.

Assign Configuration Sets per email identity

Amazon Simple Email Service (Amazon SES) now enables you to assign a configuration set to an email identity, such as a specific email domain or individual email address.

Redesigned Service Console

We have optimized the new console to provide customers with a simpler, more intuitive way to create and manage their resources, collect sending activity data, and monitor reputation health

Add attachments of up to 40MB

Amazon Simple Email Service (Amazon SES) customers can send and receive emails with a message size of up to 40MB.

Enhanced security with DKIM 2048

DomainKeys Identified Mail (DKIM) is a standard that allows senders to sign their email messages with a cryptographic key. With SES, customers can now enable enhanced 2048 DKIM

Reputation and why it matters

Certified for regulated industries to ensure businesses can communicate with customers, securely

What is “reputation”?

- Two primary types of reputation
- Right-to-send authentication

Amazon SES platform reputation

- Platform quality management
- Fast spam detection

Why is reputation important?

- Enables delivery and inbox placement
- Proves you are who you say you are

Monitor and manage your reputation

- Analytics and diagnostics
- Private sending channels

Deliverability tools

Virtual Deliverability Manager (VDM)

- Insights into their full delivery and engagement funnel
- Recommendation engine to monitor configuration and sending.
- Visibility into delivery and engagement performance down to the level of each email sent. <new>
- Automated sending optimization to provide the highest reputation IP channels available over shared Ips

Dedicated IP addresses - Standard

- Isolated IP channel for email sending
- Independent from IP reputation influences created by other senders using Amazon SES
- Each IP is used solely by the customer, and only for sending emails through SES

Dedicated IP addresses – Managed

- Isolated IP channel for email sending
- Independent from IP reputation influences created by other senders using Amazon SES
- Each IP is used solely by the customer, and only for sending emails through SES

Bring-your-own-IP-addresses

- Use your own IP addresses for complete control of your sending IP reputation

Virtual Deliverability Manager (VDM)

Deliverability is the difference between inbox and spam

Improve inbox placement through automated deliverability features with VDM

Uncover problems through insights (Dashboard)

Address issues fast with real-time recommendations (Advisor)

Let Amazon SES improve your sending with automated implementation tools

Amazon SES > Virtual Deliverability Manager > Advisor

Virtual Deliverability Manager advisor [Info](#)

Virtual Deliverability Manager advisor lets you optimize your email deliverability and engagement by identifying key performance issues and how to resolve them accordingly.

Demo: Email delivery and engagement history

Confirm delivery of critical emails quickly

Investigate delivery problems by sampling failed emails

Get a list of your engaged recipients for more marketing activities

The screenshot displays the AWS SES Messages console. The top navigation bar includes tabs for Accounts, ISP, Sending identities, Configuration sets, and Messages. The Messages tab is active, showing a list of messages with columns for Recipient, From address, Subject line, Send date, ISP, and Engagement. A search bar and a date range filter (2023-09-09T00:00:00-07:00 to 2023-09-15T23:59:59-07:00) are visible. The message list shows several entries, with one selected. The right sidebar provides detailed information for the selected message, including the From address (canary@vdm.canary.sysmon-iad.adzel.com), Recipient (transientbounce@transient.bounce.sysmon-iad.adzel.com), Subject line (BaconSystemMonitor OP:BatchGetMetricData SEND_TIME:2023-09-11T19:14:58.004Z), ISP (AmazonSES), Message Id (0100018a85ab1b6a-817f02c2-9353-4763-bf21-22da5641788c-000000), and Event history (Transient bounce).
