Agenda

Amazon Simple Email Service (SES)

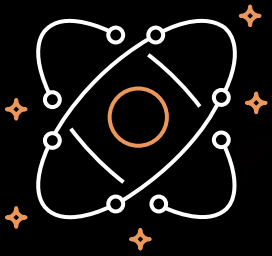

Amazon SES scalability

Email deliverability overview

Amazon SES 2022 feature launches

Amazon Simple Email Service (SES)

A scalable, cost-effective, and flexible cloud-based email service that allows digital marketers and application developers to send and receive emails from within any application

Amazon SES key features

- Dedicated IP and shared IP environments
- Email authentication
- Email event tracking
- List management and subscription management
- Account-level suppression list
- Dedicated IP addresses (managed)
- Virtual Deliverability Manager (VDM)

Why Amazon SES?

High performance

A high-performance platform with low latency and error rates designed to potentially send millions of emails in hours instead of waiting for days to send thousands of emails

High deliverability

Amazon SES maintains a strong reputation among mailbox providers by actively filtering spam and malicious content

Configurable

Create rules that are applied to the emails you send using Amazon SES – separate your promotional emails from order updates/password reset emails

Scalability

Amazon SES is a highly scalable AWS cloud-based email technology used to send billions of emails daily by thousands of customers worldwide including Amazon.com, Netflix, Reddit, Duolingo, and Iterable

The Netflix logo, consisting of the word "NETFLIX" in a bold, red, sans-serif font.The Duolingo logo, featuring the word "duolingo" in a green, lowercase, sans-serif font.

Email deliverability overview

Rules for successful email deliverability

- Send to people who have explicitly requested your email
- Understand the internet service provider (ISP) expectations
 - ISPs have specific guidelines for delivering messages
 - There are common best practices among most ISPs
- Sender reputation plays a pivotal role in email deliverability

Deliverability best practices

- Other factors (outside of bounces and complaints) that influence inbox placement and general deliverability to major ISPs:
 - Content
 - Lists
 - Scheduling
 - Cadence
 - Type of messages sent
 - Sender reputation (IP/domain)

Amazon SES 2022 feature launches

Dedicated IP addresses (managed)

- What are dedicated IP addresses (managed)? Why would you need them?
 - Easy onboarding
 - Auto-scaling per ISP
 - Warmup per ISP
 - Adaptive warmup

Virtual Deliverability Manager (VDM)

- Advisor recommendations
 - Infrastructure, DNS, and authentication notifications
- Dashboard to monitor performance
 - Review delivery and engagement data in a centralized dashboard
- Optimized shared delivery
 - IP traffic automation and resource management

Thank you!
