Agenda

- 01 Amazon CloudWatch pricing model
- 02 CloudWatch spend strategy (whiteboard)
- 03 Tips and takeaways

Amazon CloudWatch pricing model

- Pay as you go
- Tiering
- Feature alternatives
- Indirect usage

Amazon CloudWatch pricing model

PAY-AS-YOU-GO MODEL

- Pay as you go
- Prorating

Amazon CloudWatch pricing model

TIERING

- Tiered pricing
- Free tiers

“

I suddenly saw a spike in my CloudWatch cost for this month. How do I know which features contribute to that?

APPROACH TO IDENTIFY CLOUDWATCH SPEND

Cost analysis

APPROACH TO IDENTIFY CLOUDWATCH SPEND

“

I identified an increase mostly due to logs. How do I know which log group is causing the extra spend?

“

I identified high CloudWatch metrics API charges from GetMetricData. How can I optimize that spend?

“

I have 2 metrics filter with 1 dimension each, creating around 10K datapoints every day. How much would be the cost? Is the cost calculated per metric or per datapoint?

“

What should I do if I have duplicated spend for sending data to a monitoring account?

“

How can I optimize my dashboards? They are very similar/repeating.

Tips and takeaways

- Identify key spends with AWS Cost Explorer and AWS Cost and Usage Reports (CUR)
- Use dashboards for drill down
- Logs are sensitive to ingestion rate and verbosity
- Use Amazon CloudWatch billing documentation
- Review alternate features
