

The background of the image features a dark blue gradient on the left, transitioning into a large, vibrant, abstract shape on the right. This shape is composed of overlapping curved segments in shades of orange, pink, and purple, creating a dynamic, modern aesthetic.

AWS re:Invent

NOV. 27 – DEC. 1, 2023 | LAS VEGAS, NV

DAT318

Improve performance and availability with Amazon RDS Multi-AZ DB clusters

Jim Mlodgenski

Senior Principal Engineer
AWS

Simon Komendera

Principal Solutions Architect
AWS

Amazon RDS

Managed relational database service with a choice of popular database engines

PostgreSQL compatible

MySQL compatible

MySQL

PostgreSQL

MariaDB

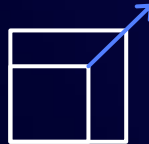

SQL Server

Oracle

Easy to administer

Easily deploy and maintain hardware, OS, and DB software; built-in monitoring

Performant and scalable

Scale compute and storage with a few clicks; minimal downtime for your application

Available and durable

Automatic Multi-AZ data replication; automated backup, snapshots, and failover

Secure and compliant

Data encryption at rest and in transit; helps customers achieve their compliance goals through tooling

Amazon RDS Multi-AZ cluster deployment option

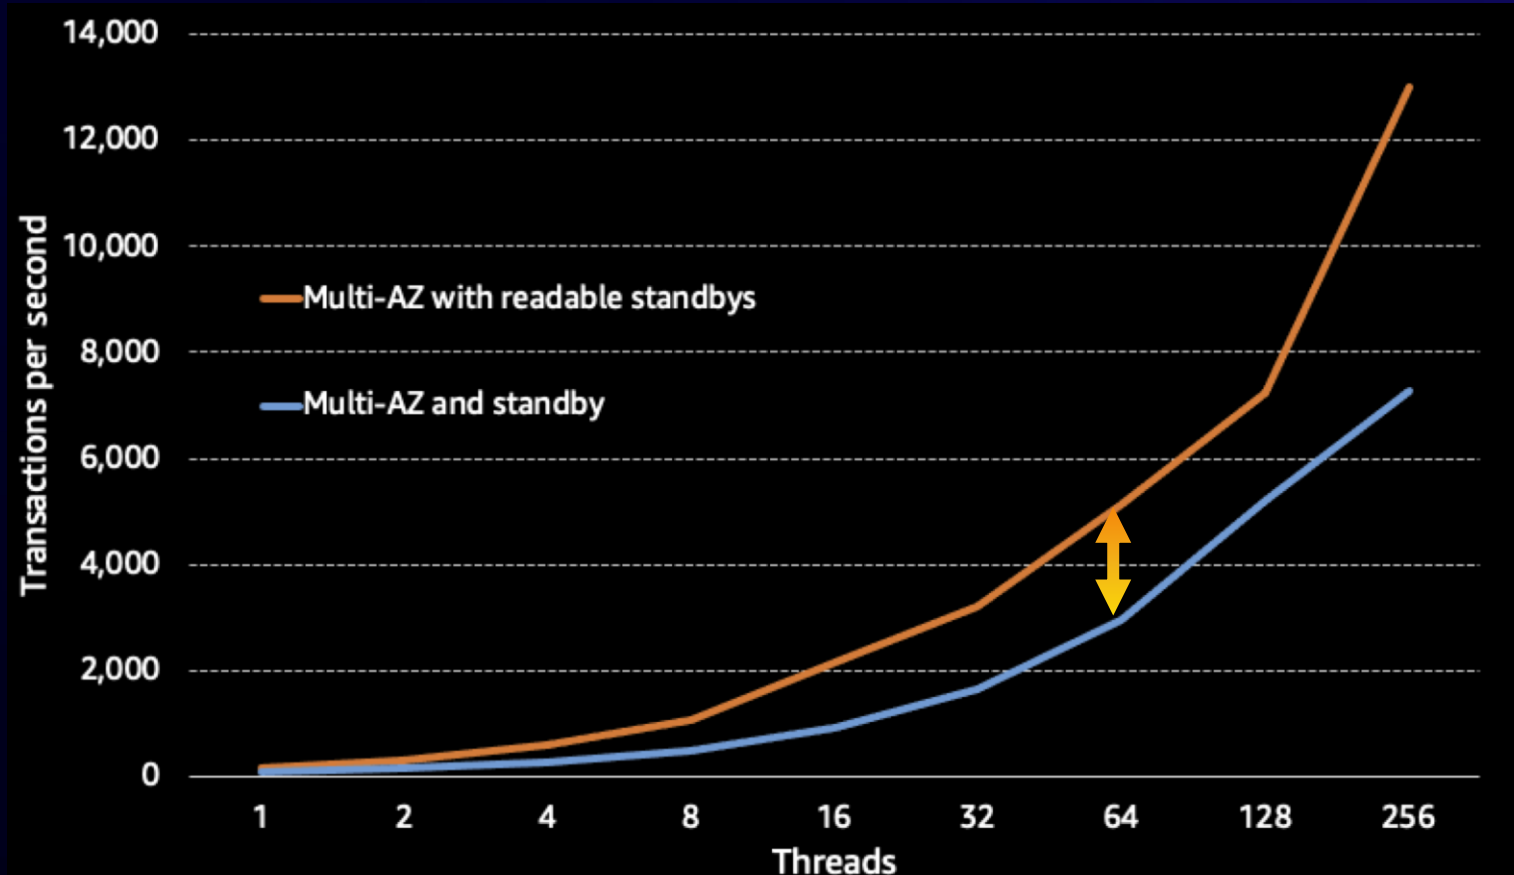

1 primary and 2 readable standbys across 3 Availability Zones

- Improved commit latency
- Automated failovers typically under 35 seconds
- Readable standby instances
- Endpoints for read/write splitting

Improved performance

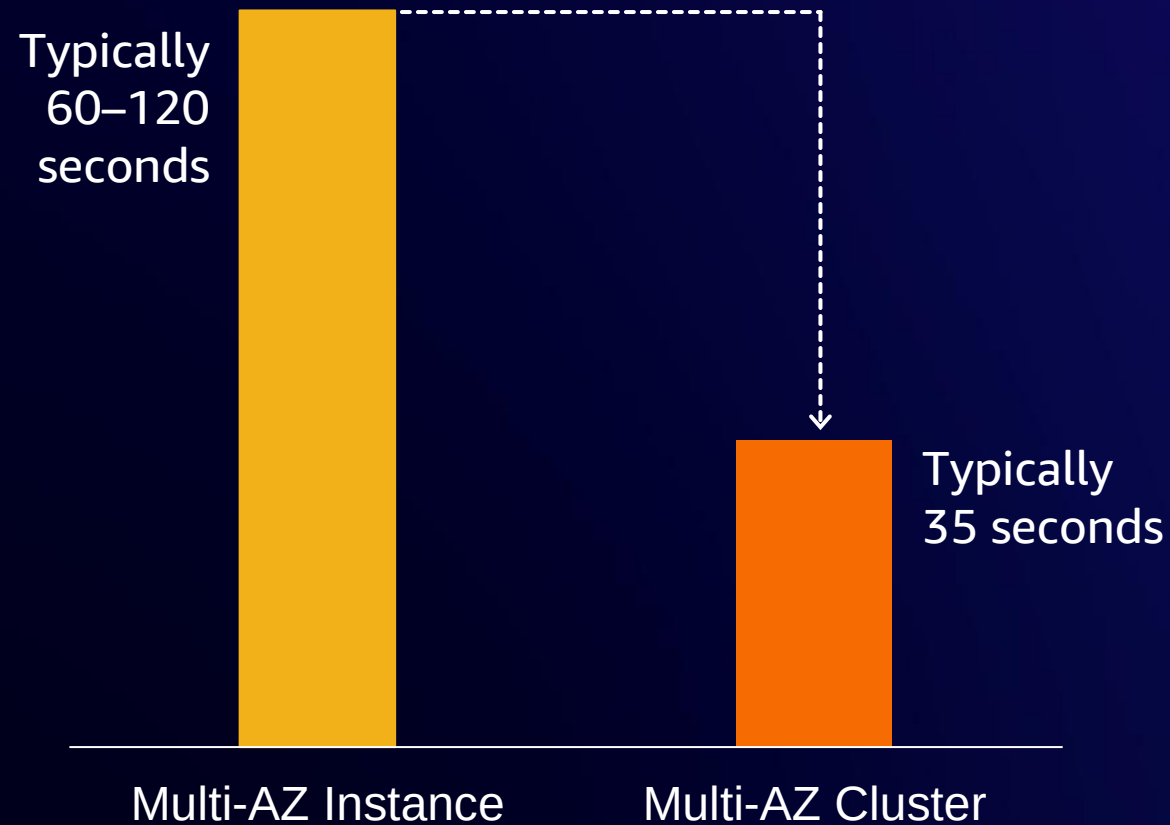

Amazon RDS for MySQL – OLTP read/write

up to 2.3x
TPS increase

p95 write latency reduced
up to 60%

Faster failovers

**No crash
recovery step
=
Faster, more
predictable
failovers**

Thank you!
