Today's agenda

- 01 Life before Storage Lens 😞
- 02 Amazon S3 usage at Netflix
- 03 What Storage Lens is (briefly)
- 04 What Netflix did
- 05 Life with Storage Lens 😊

Life before Storage Lens

What % of bucket growth was attributable to what prefix(es)?

How is storage used?

What's my distribution across storage classes?

How can I cost optimize?

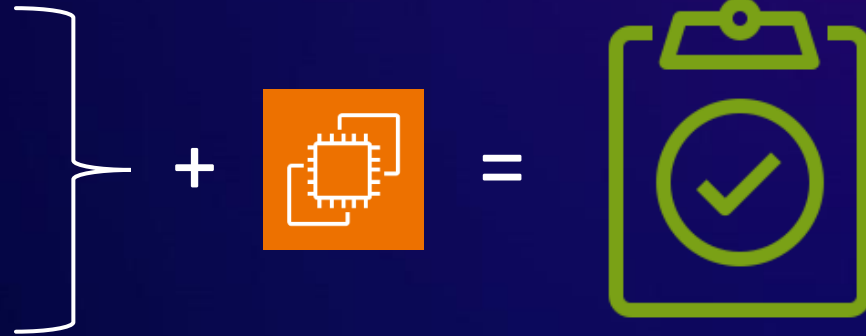

How can I tie storage growth to access patterns?

What % of objects were accessed in a 30-day running window?

Life before Storage Lens

- S3 access logs
- Object inventory report
- AWS Cost and Usage Reports

Drawbacks

- Set up and maintenance
- Lack of nuance behind growth
- Finance-driven vs. data owner-driven

Amazon S3 usage at Netflix

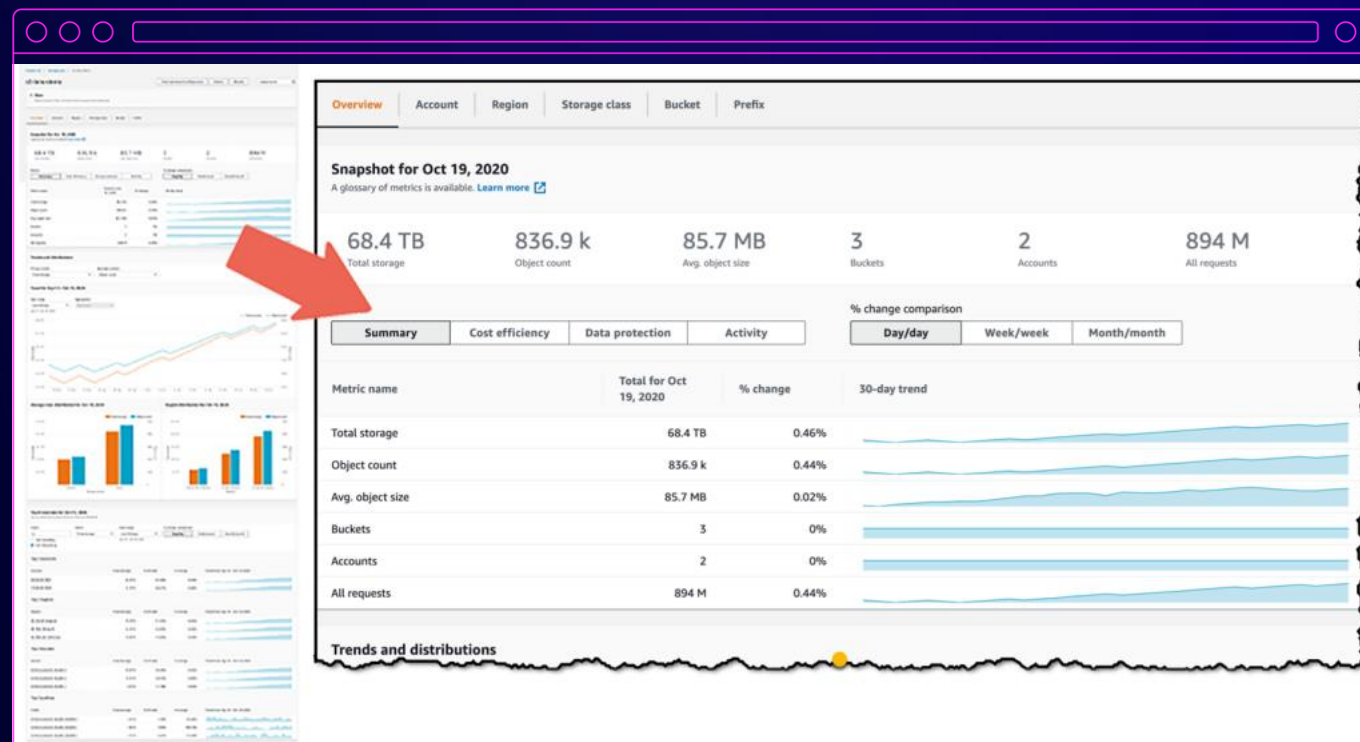

Amazon S3 usage at Netflix

What is Storage Lens? 🔍

- Organization-wide visibility into object storage
- Metrics aggregation
 - Prefix
 - Bucket
 - Account
- Console dashboards or metrics export

What Netflix did...

TO THE WHITEBOARD

Life after Storage Lens

Data lake

50 PB of noncurrent
version objects

Uncovered duplicate
snapshot retention

Encoded assets

Access patterns showed
80%+ "cold" data

Allowed data owners to turn
on S3 Intelligent-Tiering

Encoding bug

Prefix-level growth increase
of 25 PB in 90 days

Data owners found bug in
intermediate object
cleanup process
