

The background of the image features a dark blue gradient on the left, transitioning into a large, vibrant, abstract shape on the right. This shape is composed of overlapping curved segments in shades of orange, pink, and purple, creating a dynamic, modern aesthetic.

AWS re:Invent

NOV. 27 – DEC. 1, 2023 | LAS VEGAS, NV

NTA208

Building secure multi-account DevOps pipelines for container workloads

Sailesh Kadam

Sr. Solutions Architect
AWS

Agenda

- Common challenges
- Single account vs. multi-account strategy
- CI/CD for container workloads
- Securing the pipeline
- Best practices/takeaways
- Q&A

Common DevOps challenges

Coordination across teams

Environmental complexity

Change control processes

Why one account isn't enough

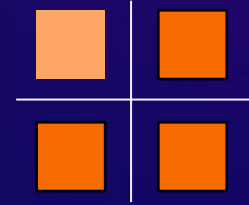

Many teams

Security and
compliance controls

Billing

Isolation

Business
process

Multi-account deployment strategy

AWS Control Tower offers the easiest way to set up and govern a secure, compliant, multi-account AWS environment

AWS managed
service version of
multi-account
environment

Deployment of AWS
best-practice
blueprints and
guardrails

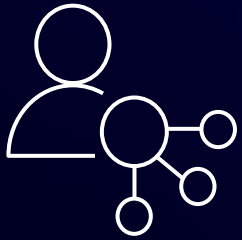

Automated
account creation
based on AWS
best practices

Dashboard for
monitoring
compliance status

DevOps for containerized workloads

Improve developer productivity

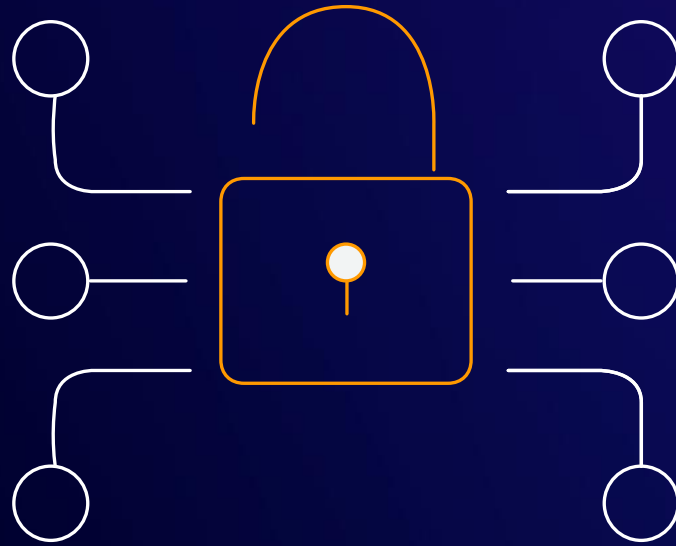

Improve code quality

Deliver updates faster

Securing the pipeline

At AWS, security is the top priority, and DevOps is no exception

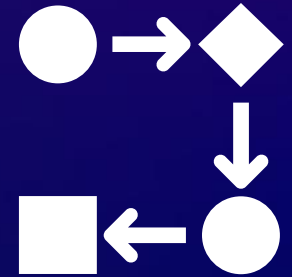

What is DevSecOps?

Development

Security

Operations

Architectural scenario

Best practices

- Multi-account structure
- AWS Control Tower for account factory, guardrails, etc.
- One pipeline per application/workload
- Central DevOps account managing permissions
- Staging accounts consume from DevOps account
- Establish role-based security, least privileges
- Use application/container security scanning

Q&A

Thank you!
